CHECK LIST OF BULLETINS, CIRCULARS AND MISCELLANEOUS PUBLICATIONS OF THE BUREAU OF AGRICULTURE WITH INDEX THERETO

By EDUARDO R. ALVARADO

INTRODUCTION

The purpose of this check list and index is to provide the farmer, the scientist, the researcher, and the student with a guide to the publications of the Bureau of Agriculture on the subjects treated of and those available, and to serve as a record of the contributions of the Bureau of Agriculture to the Philippine agricultural literature.

In going over the records of the Bureau of Agriculture it is amazing to find what a wealth of agricultural literature was written by the former American technical personnel of this Bureau, who did pioneering work in scientific agriculture in the Philippines, and by the technical Filipinos who later continued and are continuing the work of the former. Such is the volume of their work, that, for convenience, it is advisable to separate the whole bibliography into three parts, namely:

Part I. Check list of bulletins, circulars, and important miscellaneous publications, with an index thereto;

Part II. Check list of articles contained in the serial publications of the Bureau of Agriculture, with an index thereto; and

Part III. Check list of articles written by the personnel of the Bureau of Agriculture and published elsewhere, with an index thereto.

Classes of Publications.—The Bureau of Agriculture publishes three classes of pamphlets or booklets—bulletins, circulars and miscellaneous books, and pamphlets. Four kinds of bulletins were formerly published—the farmers', the press, the popular and the technical bulletins,—but the first three have been discontinued. (See the lists on pages 7–20 and the indexes on pages 21–38.)

The Farmers' Bulletins.—These contain information compiled from various sources relative to agricultural matters and were prepared in a popular style for the purpose of diffusing agri-

cultural information. Seventeen of these bulletins were published. (See the list on page 7.)

The Press Bulletins were pamphlets intended for reproduction in the local press. After Press Bulletin No. 11 was published the Press Bulletin, was replaced by a monthly, the Philippine Agricultural Review in 1908. (See the list on page 7.)

The Popular Bulletins were short and simple pamphlets translated into native dialects. They correspond to the present Circulars of the Bureau of Agriculture. Only three Popular Bulletins were published, so far as the records of the Bureau of Agriculture show. (See the list on page 8.)

The Bulletins.—These are more technical in nature and embody the results of experiments and investigations conducted by the Bureau of Agriculture. Thirty bulletins were published, No. 3 being assigned to two subjects and Nos 8–17, not being assigned. (See the list on page 8.)

The Circulars are popular in character containing practical instructions on agriculture intended for such farmers as have had no technical training. Many of these circulars are published in the native dialects. There are now 187 circulars. (See the list on page 10.)

Miscellaneous.—Several other publications issued unnumbered are yet so important that they are included in the list. These are “A Handbook of the Sugar Industry in the Philippines,” by G. E. Nesom and Herbert S. Walker and other collaborators, which is a textbook in this important industry; “A Compilation of Planting Instructions” a sort of a manual for fieldsmen as well as for farmers; “Facts and Figures about the Philippines,” by the Bureau personnel and other contributors, a handbook of general information about this country and its people, “The Bureau of Agriculture: The Farmers’ Bureau,” a description of the activities of this Bureau in relation with the farmers, and the annual reports of the Bureau of Agriculture. (See the list on page 18.)

It will be noticed in the following lists that publications preceded with an asterisk (*) are out of print. File copies of many of these, however, are found in the Library of the Bureau of Agriculture.
